

SyberWorks Announces SOP Automation for Regulatory and Process Mandated Industries

Waltham, Massachusetts – July 8, 2009

SyberWorks, a leader in custom e-Learning Solutions and the Learning Management System industry, announced today that they have developed the SyberWorks SOP Automation Module to track and manage standard operating procedures (SOPs) that employees must read and confirm that they understand.

David Boggs, CEO of SyberWorks, states,

“The SOP Automation Module was developed to meet the needs of SOP management for the medical device, pharmaceutical, life sciences, law enforcement, security industries and FDA regulated environments where organizations are required by law to track training records and directives. In these settings, auditors or supervisors regularly examine training records to determine if an employee has been trained and certified on a set of SOPs that may often impact product quality and safety.”

Boggs adds, “The SyberWorks SOP Automation Module gives your organization a leg-up in managing the audit process because it provides you the tools your company needs to track and manage your SOPs. The system has a full complement of training records audit trail reports that detail any changes made to SOPs and the employee’s training record. If an auditor arrives at your location unannounced, you can feel confident and assured that the information you need to provide is right at your finger tips.”
